June 19, 2025 - June 26, 2025

Website Overview

A snapshot of your website's accessibility health and your progress towards violation remediation.

Scanning Summary

RAMP is actively monitoring 269 pages for WCAG 2.2 AA violations on a weekly basis.

Automated Accessibility Score	# of Pages with Violations	# of Violations
100/100	**0**	**0**
Based solely on automated scanning	out of 269 monitored pages	**0** Critical, **0** Serious, **0** Moderate, **0** Minor

Remediation Activity

The number of Remediation Tasks created to organize and tackle accessibility work.

Created Tasks	Completed Tasks	Pending Tasks
0	**0**	**0**

Automated Scanning and Remediation Details

A detailed view into your website's performance based solely on automated tests, which only detect a portion of accessibility issues, and your remediation progress.

Accessibility Score and Violation History

A breakdown of your accessibility score, total violations, and violations by type.

Date	Score	Total Violations	Critical	Serious	Moderate	Minor
June 26, 2025	📊 100/100	0	0	0	0	0

Automatically detected errors impact your score differently based on the pervasiveness of the error across the page and website. Your score does not indicate full conformance. Automated testing alone cannot replace human involvement in assessing and improving accessibility.

Highest Occurring Violations

Our automated tests detected these violations the most.

No violations.

Notable Pages

Based on automated scan results, these pages were the best and worst performing in descending order.

Page Details	Score	Violations
/ +269 others	📊 100/100	0

Remediation Progress

Progress is measured by our task management system consisting of remediation tasks. Here's what your team worked on between June 19, 2025 - June 26, 2025.

Completed Tasks

These are tasks that have been marked as complete by your team. Tasks that include pages were created from recommendations and have been confirmed as resolved by our scanning system.

No completed tasks.

Current Tasks

Here is what your team is currently working on. These are tasks marked as "In Progress," "To Do," or "Pending Rescan." Tasks that include pages were created from recommendations.

No current tasks.

Recommended Action Items

We've organized the most pervasive accessibility issues so you can prioritize your work and improve your automated accessibility score.

Top Recommended Action Items

Focus on remediating these first to improve your accessibility score.

Recommendation	Projected Score Increase	Affected Pages
Add labels to input in section Form <input> elements must have labels	+0.94	2
Fix insufficient color contrast of section Text elements must have sufficient color contrast against the background	+0.93	1
Fix insufficient color contrast of content in section Text elements must have sufficient color contrast against the background	+0.92	1
Fix insufficient color contrast of dt in header Text elements must have sufficient color contrast against the background	+0.92	1
Fix insufficient color contrast of link in section Text elements must have sufficient color contrast against the background	+0.92	1

Uncover up to 100% of WCAG violations with Manual Auditing

Once you've tackled the accessibility issues uncovered through automated scanning, it's time to conduct a manual audit to ensure WCAG conformance.

No automated tool today replaces the need for manual auditing. For example, an automated tool can tell you the tab order, but a human must confirm that it follows a logical progression.

After establishing your page templates, you can audit each page by testing each WCAG criteria. [RAMP's Guided Manual Audit Tool](#) will guide you on testing, identifying, and resolving any issues.

We built RAMP out of our own WCAG auditing practice. We'd love to show you how to use RAMP to do this work yourself, but if you or your organization doesn't have the capacity to do manual auditing, our [WCAG Auditing Experts can help](#) .
